

## EPS & Revenue

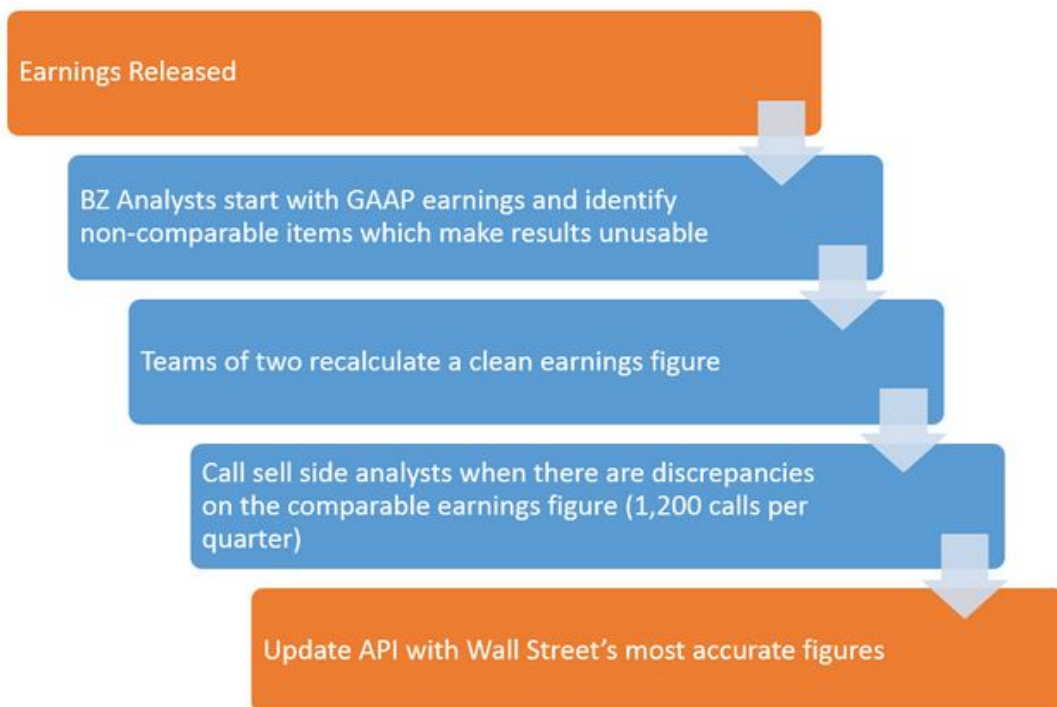

### Overview

The cleanest figures allow peace of mind when comparing data to analyst expectations. Investors can also build the most reliable models without concern that one-time adjustments will distort projections.

## Our Difference

When **Netflix** reported its Q1 earnings in April, media outlets reported earnings of \$0.38 per share. What wasn't taken into account was \$0.39 of foreign currency charges, which were not factored into guidance or Wall Street expectations.

Benzinga's team spotted this, got on the phone with analysts and reported comparable earnings of \$0.77, not \$0.38. This turned what looked like a 44.9 percent miss into an 11.5 percent beat. And the stock soared.

## The Fine Print

Benzinga covers the Wilshire 5000 plus an additional 1,000 U.S.-listed equities. Server uptime is guaranteed at 99.95 percent.
